

Custom Machine Hosts BTMA BotsIQ Demonstration Event

On Wednesday evening, May 2, 2007, Custom Machine was pleased to host members of the Boston Tooling and Machine Association and other guests for a full facilities tour, a series of intriguing BotsIQ demonstrations, and a catered dinner buffet.

The centerpiece of the event was the Winchester High School robotics team's BotsIQ demonstration, close on the heels of their appearance at the BotsIQ National Competition in Miami where one of their robots took top honors in one of the "Robot Rumbles." Custom Machine and Boston Centerless are both actively involved in helping and mentoring the school's robotics team.

During dinner, the BTMA conducted association business, introduced new association members and recognized membership milestones. Soon thereafter, two Red Sox tickets in prime locations, donated by Custom Machine, were raffled off.

BTMA is the Boston Chapter of the National Tooling and Machining Association. Its primary purpose is to promote the region's precision custom manufacturing industry and provide members with services and information to assist them in the successful operation of their businesses.

Custom Machine, Inc., of Woburn, Mass., is a national leader in ultra-precision engineering and machining of components for discriminating customers worldwide.
